## Create an Elastic IP

### Step 1: Allocate a new Elastic IP

- In the EC2 dashboard, search for the Elastic IP and select it

- Click on **Allocate New Address**
- Click on **Allocate**
- A new elastic IP would be created for you

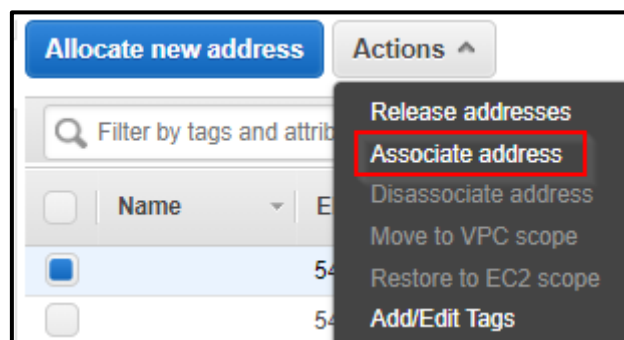

*Remember you will get charged for Elastic IP when it is not attached to EC2 instance*

- Close the windows once created

### Step 2: Associate the Address to your EC2 instance

- Under **Actions**, select the **Associate address**

- Select an EC2 instance and its private IP from the drop-down
- Click on **Associate**

Addresses > Associate address

### Associate address

Select the instance OR network interface to which you want to associate this Elastic IP address (13.126.128.107)

**Resource type** ☒ Instance ⓘ  
☐ Network interface

**Instance**  ⓘ

**Private IP**  ⓘ

**Reassociation** ☐ Allow Elastic IP to be reassociated if already attached ⓘ

**Warning**

If you associate an Elastic IP address with your instance, your current public IP address is released. [Learn more](#).

▶ AWS Command Line Interface command

Cancel **Associate**

## Conclusion

You have successfully created an Elastic IP and associated it to an instance
