Creating a Custom AMI

Step 1: Create an AMI

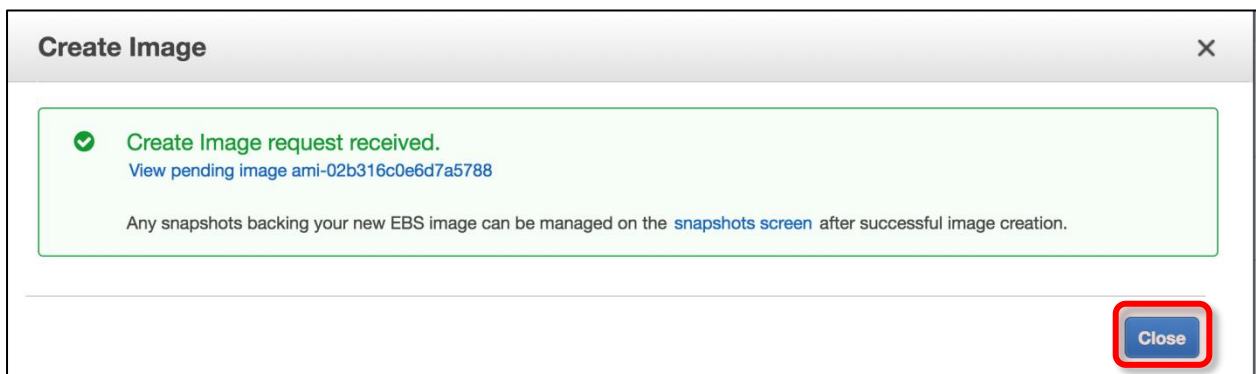

- Select the existing EC2 instance you have created, and under **Actions**, choose **Image**, and click on **Create Image**

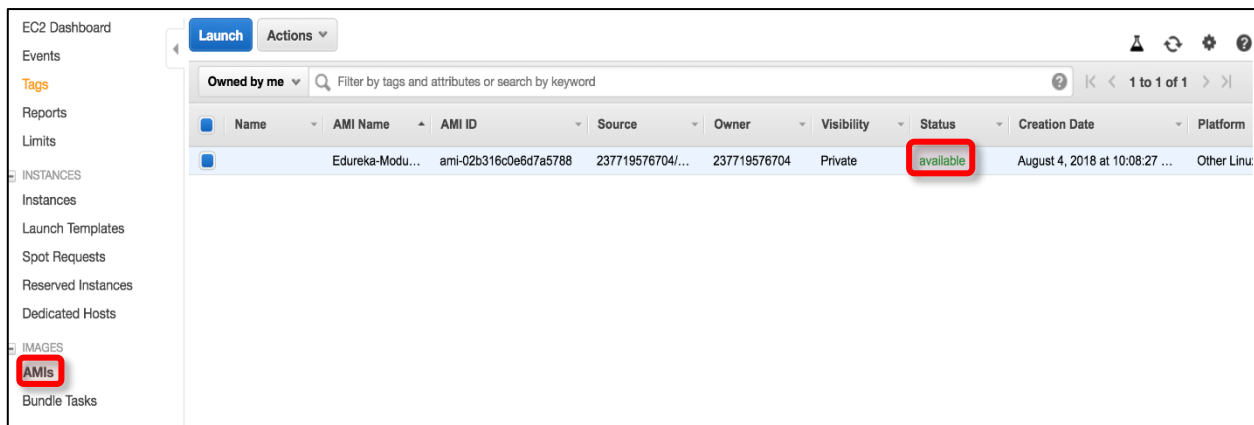

- Provide a name for the image and click on **Create Image**

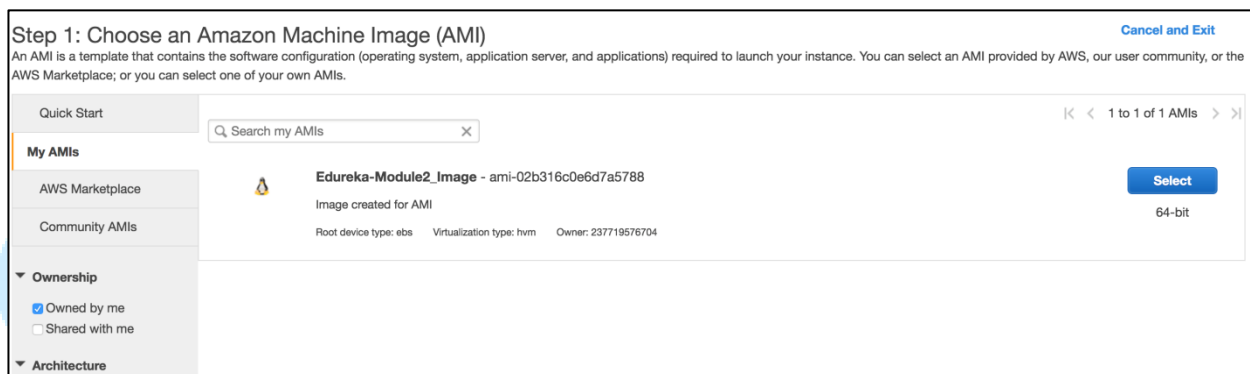

- Once the image is successfully created, you can view it in the AMI panel

Step 2: Launch an EC2 Instance using your AMI

- From the **My AMIs**, choose your AMI and launch the instance as shown in demo 1

Step 3: Launch an instance using the above AMI

- Connect to this instance using SSH
- It will have all the software installed on the old instance

whereis java

```
ubuntu@ip-172-31-17-145:~$ whereis java
java: /usr/share/java
```

Conclusion

You have successfully created a custom AMI.
